ps — What process is going on

ps —ax — complete process

When we see this we will get to know abt process ID at Fırst

eoı2210

we use ls /proc/2210 to know about Files.

process creation:-

We nedd system call to access in kernel.

system() → system call

fork ()
wait ()
wait pid ()
exec ()

clone ()

} system call

clone () is very important
it should be kept safe.

orphan process - parent is gone
but child is running.

Fork () → child process

To stop zombie } wait ()
       process } wait pid ()

To access

Fork 1

↓ process is going on

Fork ()

parent process   creates a child process

The both parent process & child
process starts to run seperately.
